Application/Control Number: 09/770,316

Art Unit: 2142

Election/Restriction

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
- I. Claims 1-15,43-55, drawn to a method for use at a gateway node in a converged telephony / data network environment for communicating operating status information associated with nodes in a signaling system 7 (SS7) telephony signaling network of the converged network to nodes in a data network of the converged network, classified in class 709, subclass 249.
- II. Claims 16-34,56, drawn to a method for use at a gateway node in a converged telephony / data network for distributing operating status information associated with a node in a signaling system 7 (SS7) network of the converged network to nodes in a data network of the converged network, performing a routing key database lookup using information contained in the SS7 network management message and identifying a node in the data network capable of communicating with the SS7 node and wherein communicating the operating status information to the identified node in the data network includes communicating the operating status information to an IP node in an Internet protocol (IP) network, classified in class 709, subclass 379/220.01.
- III. Claims 35-42,57, drawn to a signaling gateway, classified in class 370, subclass 401.
- 2. Inventions I,II and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP. § 806.05(c)). In the instant

Application/Control Number: 09/770,316

Art Unit: 2142

case, the combination as claimed does not require the particulars of the subcombination as claimed because the broadest combination claim i.e. claim 1 does not require "a routing key database lookup using information contained in the SS7 network management message and identifying a node in the data network capable of communicating with the SS7 node" as recites in the broadest subcombination claim 16, and does not require, first and second node, receiving from a second node in the data network a second status audit message requesting the operating status of first node in the SS7 network; determining whether the second status audit message is received within a predetermined time period following receipt of the first status audit message as as recites in the broadest subcombination claim 35. The subcombination has separate utility such as a communication network element that is capable of routing signaling messages and also performing inter-network management functions.

- 3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
- 4. During a telephone conversation with Gregory A, Hunt on 6/4/04 to request an oral election to the above restriction requirement, but did not result in an election being made.
- 5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).
- 6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Examiner Hieu Le whose telephone number is (703) 306-3101. The examiner can normally be reached on Monday to Friday from 8:00 AM to 4:00 PM.

Application/Control Number: 09/770,316

Art Unit: 2142

The fax number of this Group 2153 is (703) 872-9306 or 305-7201. Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Group receptionist whose telephone number is (703) 305-3900.
